

No fear, painless dentistry

You'll feel completely at ease during your sedation dentistry appointment, and we'll monitor your vital signs throughout your treatment. Even with IV sedation, patients are never completely "under." They can converse with staff to express their needs and answer questions. Sedation dentistry provides the opportunity to complete several procedures in a single visit, which means fewer appointments to achieve a strong, healthy, and beautiful smile. Plus, time flies while under sedation. Upon completion of your treatments, you'll feel like you've been at our office only a few minutes!

SLEEP
DENTISTRY

Sleep dentistry...the anxiety-free way to a beautiful smile.

Calm. Comfortable. Relaxed.

Why only dream of having a beautiful smile, when you can dream while getting a beautiful smile.

A Safe, Stress-Free Experience

There are many reasons 50% of the population put dental care at the bottom of their healthcare list. Some people are downright fearful, while others have suffered bad experiences in the past.

It's time to rest easy. Sleep dentistry is here.

You'll find that your treatment is performed more comfortably than you might ever have thought possible. You'll be drowsy and unaware of the time passing by. Our specially trained and certified team will monitor you continually. Plus...we can accomplish extensive amounts of dentistry at one time, and you'll have little or no memory of the experience.

For anxious patients, these treatments are a miracle. At Pure Dental, we strive to make your dental visit as comfortable as possible with amenities such as eye masks, headphones, neck pillows, and calming essential oils. You will wake up feeling peaceful and ready to enjoy your new smile.

SEDATION OPTIONS

Nitrous Oxide

Nitrous oxide -- otherwise known as "laughing gas" -- combined with oxygen is breathed through a mask that's placed over your nose. The gas helps you relax and tends to wear off quickly.

Oral Sedation

You take a pill about an hour before the procedure. The pill will make you drowsy, although you'll still be awake. Some people become groggy enough to actually fall asleep, and can be awakened with a gentle shake.

IV Sedation

This is a light to moderate form of sedation similar to Oral sedation except you receive the drug through an IV. The IV allows for additional dosing if required.

Call us at 631.929.5855 to learn how your next dental visit can be totally stress free.
